

**Distance Education Delivery Modalities Proposal to Revise**  
(Original version approved by the Academic Senate March 26, 2007)

1. **Online** — An online course is delivered primarily via the Internet typically using a campus-supported Learning Management System (LMS). Such a course may require limited on-campus meetings for orientation or assessments. Students are required to use a computer with Internet access as the primary technology, and may be required to use other available technologies to acquire and learn course content. Through regular effective contact, instructor and students interact to complete assignments and assessments, and demonstrate Student Learning Outcomes. An online course will be designated as **OL** in published campus materials.
2. **Hybrid** — A hybrid course combines a traditional face-to-face classroom environment, with use of the Internet and other instructional technologies to complete assignments and assessments, and demonstrate Student Learning Outcomes. Fifty-one percent or more of course learning activities are delivered via the Internet with regular effective contact between instructor and student. Typically a campus-supported Learning Management System is used to provide course content replacing face-to-face time. Students must have access to a computer and the Internet. A hybrid course will be designated as **HB** in published campus materials.
3. **ITV** —An Instructional Television Course is a course that is delivered using videotapes, DVDs or other technologies. Students learn asynchronously, outside of the face-to-face classroom. The instructor meets with students at designated times for review and maintains regular effective contact. Some of the requirements that apply for developing or teaching an online course may not apply to an Instructional Television Course. An ITV course will be designated as **ITV** in published campus materials.

Clarification:

(**Web-Enhanced** is not a Distance Education Course. Web-Enhanced refers to any course that uses the Internet, website(s) or an LMS to enhance student learning through the posting of information, learning elements, or collaboration features such as discussion areas, chat rooms or email.)

**Recommendation Approved by the Distance Education Committee - October 13, 2009**  
**Recommendation Approved by the Academic Senate – November 23, 2009**
